EDUCATION

Doctorate of Philosophy in Mechanical and Aerospace Engineering *Jan 2018 - April 2023*

University of California San Diego

Dissertation title: “State Estimation for Control”

GPA: 3.90

Bachelor of Science in Aeronautical Engineering

September 2011 - June 2016

Jordan University of Science and Technology

GPA: 3.7, Dean’s list in four semesters

EXPERIENCE

Argonne National Laboratory

Sept, 2023 - Present

Postdoctoral Researcher at the Mathematics and Computer Science Division

Investigating the Koopman operator theory applied in the stochastic optimal control context, and improving the safety guarantees of data-driven control methods.

University of California San Diego

Jan, 2018 - June, 2023

Research Assistant

I investigated and published, in the top journal of my field, in the topics of Maximum Likelihood estimation, Monte Carlo integration, stochastic Model Predictive Control and the important interaction between estimation and control. I delivered presentations and talks in conferences and for several renowned research groups.

Teaching Assistant

I enjoyed teaching various grad/undergrad engineering courses: Optimal Estimation and Filtering — Classical Control Theory — MATLAB for engineers — Soft Robotics — Fluid Dynamics — Linear Circuit Design — Experimental Techniques. I received strongly positive student and faculty evaluations, and received the Outstanding Teaching Award from my department.

ASML

June 2021 - Sep 2021

Mechanical Engineering Intern

My main effort at ASML was to incorporate FPGAs in the design for high frequency bandwidth control algorithms. I also delivered presentations about the techniques of closed-loop iterative identification for modelling of systems’ dynamics and disturbances. My performance evaluation was 19/21 which was the highest for an intern at that time.

MARS Robotics

June 2016 - Jan 2018

Control Systems Engineer

At MARS, I developed the first fully functional fixed-wing UAV autopilot, from low level control to high level guidance and navigation, including auto-landing and takeoff algorithms. I also led my team in the design of a phased-microphone array mounted on a quadrotor to detect and localize abnormal events.

Jordan University of Science and Technology

Jan 2014 - June 2016

Undergraduate Student Researcher

I worked at the experimental mechanical vibrations laboratory. Our main focus was the implementation of modal analysis via the technique of Multiple Reference Impact Testing. This required building an experience in data acquisition and digital signal processing. We also used reduced finite element models for experiment design and validation.

AWARDS

- ❖ **2021-2022 MAE PhD Outstanding Teaching Assistant of the Year Award - University of California San Diego**
- ❖ **NSF I-Corps, and IGE MedTech Accelerator Awards**
- ❖ **Nucleate Startup Accelerator program finalists - San Diego 2023**

PROGRAMMING LANGUAGES

JULIA, PYTHON (PYTORCH), MATLAB/SIMULINK, LabVIEW (FPGA), C/C++, Linux. ([GitHub](#))
